

Customer,

This is to inform you of the current rate increase reflected on your statement. The rate and tiers have increased by 3.5% (rounded to the nearest .05¢).

Each January hereafter, rates will increase by 3.5% unless the consumer price index (CPI) is higher, then it will increase by what the CPI is as of December 1<sup>st</sup> (rounded to the nearest .05¢).

The district is working on a project using bond funds and possible grant funding to install a new filtration system at the Hinkley tank site. This system will help remove iron (which is the cause of the discolored water) and manganese from the well water. We are currently in the planning, engineering, and grant phase. The system is expected to be up and running sometime in 2027. Once the filtration system is online, there will still be a transition period while the water lines are flushed to clear out remaining minerals. Thanks for your patience as we work to improve the aesthetics of the water for the customers of the district.
